Global Presence – continuing operations¹

¹ Revenues by regions 2020

Adding value along our entire supply chain

Exploration

Our potash and salt deposits came into being millions of years ago. They are either our property or we have corresponding rights or approvals that allow the extraction or solution mining of the raw material reserves.

Mining

We extract raw materials in conventional mining above and below ground as well as through solution mining. We also use the power of the sun and extract salt by evaporating sea water or saline water.

Production

The refining of raw materials is one of our core competencies. Above ground, the crude salt is processed in complex, multi-phase, mechanical or physical processes, with the natural properties of the mineral remaining unchanged.

Logistics

The long-term securing of freight capacity is of strategic importance to us. A large part of our international transportation volume is forwarded by service providers with which we maintain long-standing partnerships.

Sales/Marketing

The K+S Group wants to be its customers' preferred partner in the market. High product quality and reliability are decisive preconditions for this. K+S offers a comprehensive range of goods and services for agriculture, industry and private consumers.

Application

Our customers apply our products, use our raw materials in their processes or process them in their products. We make extensive product information available and advise our customers on the application of our products.

Customer Segment Agriculture at a glance

Agriculture customer segment

in € million	Q1/2020	Q1/2021
Revenues	453.7	469.0
Sales volume (mt)	1.90	2.01

Characteristics

- Close proximity to our main customers provides logistical advantages
- Shipments to overseas customers at competitive costs from Hamburg harbor
- Strong and long-standing customer relationships
- Broad specialty portfolio provides flexibility and stability, partly following different trends and seasons

Revenue split by region 2020 (%)

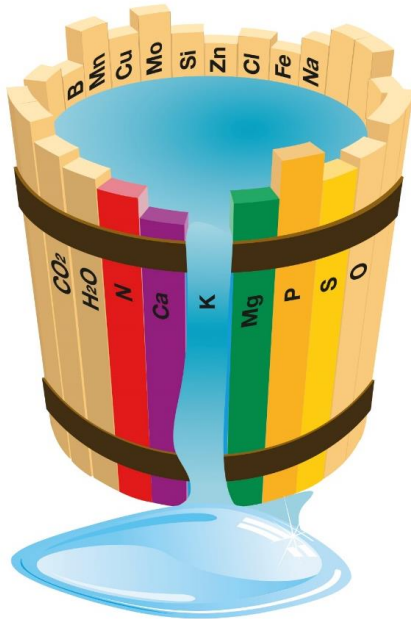

Revenue Split by products Q1/2021 (%)

Why use fertilizers?

Agriculture customer segment

“The growth and yield of plants are limited by the nutrient which is in shortest supply”¹

¹ Justus von Liebig, 'The Natural Laws of Husbandry', 1863

- Plants need sunlight, water and **minerals** to thrive
- There are only few soils on earth which have a sufficient content and availability of **plant nutrients** to achieve **high yields** over a longer period without fertilization
- Potash is an **indispensable** supplement to the natural nutrient content of soils
- Compensation of the nutrient losses by harvest and other losses is necessary

Long-term key drivers for our fertilizer business

Agriculture customer segment

Less arable land – but more protein consumption per capita

In 2050, only roughly a quarter of a soccer field will be available to feed one person year round - 80 percent of future growth in crop production will come from yield advancements driven by balanced use of fertilizers

Sources: UN, World Population Prospects, 2012 Revision, UNDP, 2013; FAOStat 2014

¹ FAO 2014 - forecasts based on the expected increase in animal protein

What makes us different?

Agriculture customer segment

Fertilizer Specialties

KALISOP®

Magnesia-Kainit®

Korn-Kali®

Patentkali®

ESTA® Kieserit

EPSO₂Top®

Potassium Chloride (MOP)

60_{er} Kali®

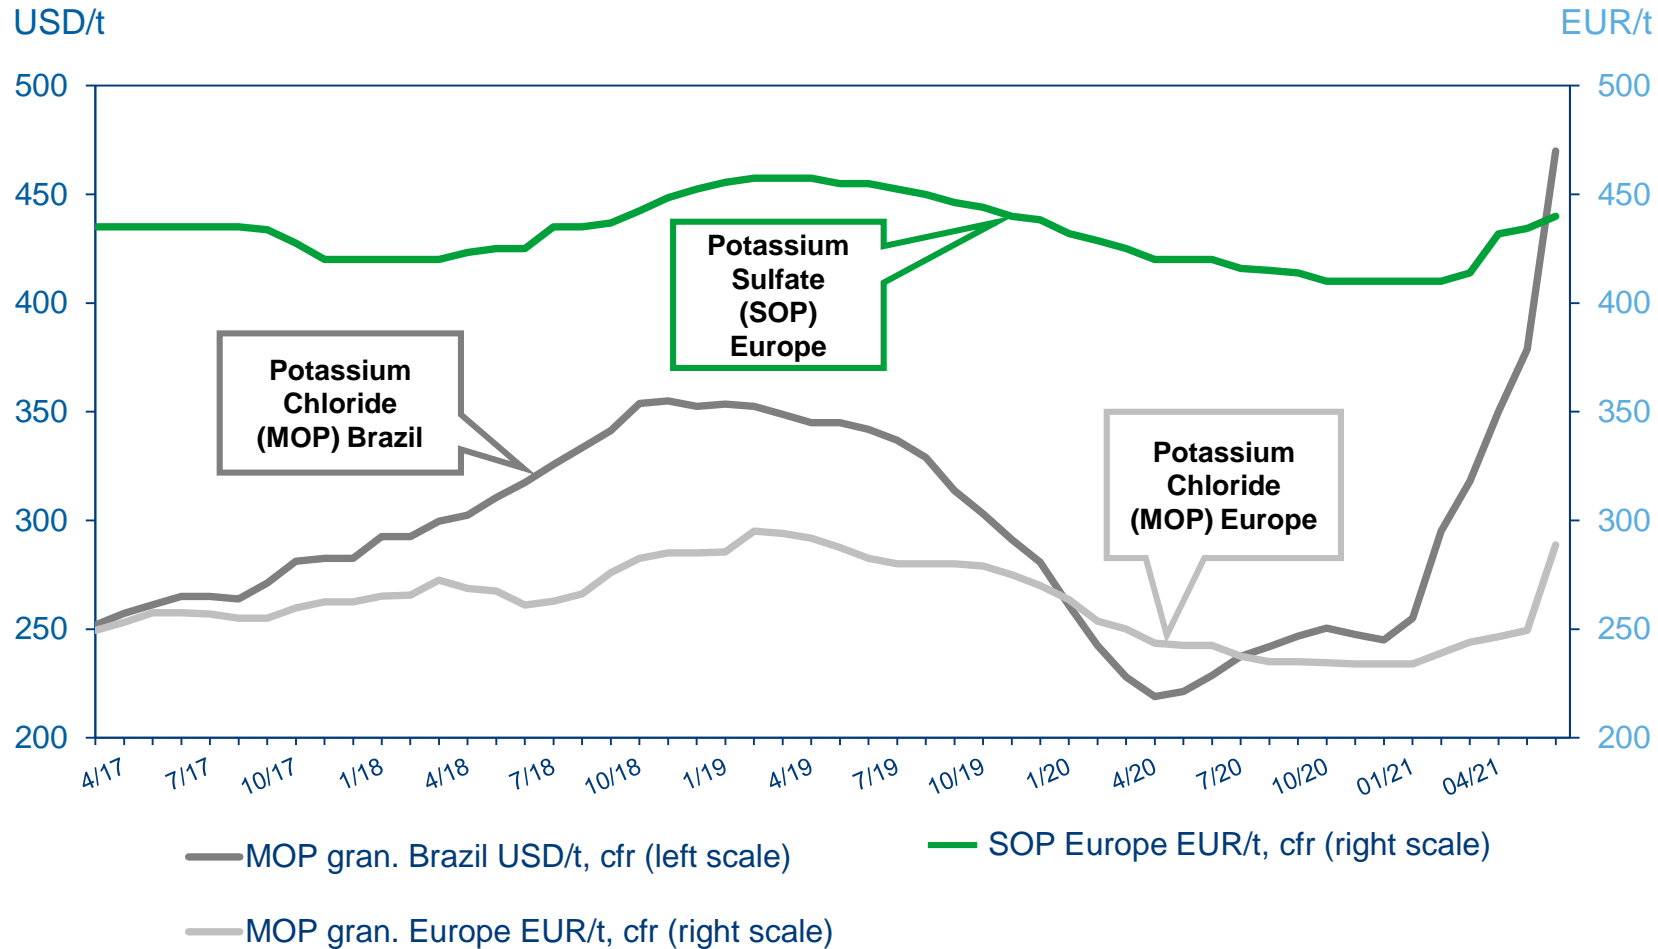

- mainly used for special applications (e.g. chloride-sensitive crops)
- products containing a broad range of nutrients (e.g. potash, magnesium, sulphur)
- premium products used for high-value crops

- can be applied universally to all crops not sensitive to chloride and to all types of soil
- standard product used for commodity crops

Incl. potassium sulphate and potash grades with lower K₂O content

Global potash supply and demand

Agriculture customer segment

Production is driven by demand despite continuous excess capacity

Basis: year 2019

Source: IFA, K+S; incl. sulphate of potash and low grade potash of about 5 million tonnes eff. (product)

Agriculture customer segment

Between plan and reality: Potash projects announced since 2006 (Greenfield)

Announced projects or in early development phases

Projects with a high probability of implementation by 2025

Projects in ramp-up phase

Agriculture customer segment

What is behind the greatly feared oversupply?

thousand tonnes

- Only 5 years ago, the technically available capacity in 2025 was estimated to be 12 million tonnes higher than today
- Even now, greenfield projects by potash newcomers will still account for a significant share of the total until 2025
- Non-utilization of capacity by existing producers not taken into account
- Global capacity load should level off at the long-term average by 2025

Source: IFA, K+S; including potassium sulfate and potash varieties with a lower K₂O content of about 5 million tonnes eff.

Potash use by crop in selected countries

Agriculture customer segment

Source: IFA , Estimates of Fertilizer Use by Crop in Selected Countries in 2010-2010/11, published 2013

Farmer profitability of US corn

Agriculture customer segment

- Expenditure on potash products only amounting to approx. 4% of the total costs
- Earnings prospects should give the agricultural industry sufficient incentive to increase yield per hectare by using plant nutrients

Global potash sales volume by region

Agriculture customer segment

Industry+ customer segment at a glance

Industry+ customer segment: continuing operations

€ million	Q1/2020	Q1/2021
Revenues	191,3	264,3
Sales volume (mt)	1,30	2,43
-thereof: de-icing	0,21	1,35

Characteristics

- Emerging markets: Footprint in rising markets such as Asia as industrialization drives demand for electrolysis
- Electrolysis and specialties: High product quality, service and customer proximity
- Pharma: High quality standards, certificates, innovation and superior customer services as well as reliability
- Consumers: strong brands for table salt, water softening, pool salts and de-icing salt
- Communities: public road construction authorities, winter road clearance service providers and large commercial users procure de-icing salt from K+S through public tenders

Revenue Split by products Q1/2021 (%)

Broad variety of industry application areas (1)

Industry+ customer segment

Chemical

- **Main applications:**
- Chemical industry
- Chlor-Alkali processes (→ PVC)
- Polycarbonates , MDI (Isocyanat) (→ plastics, synthetic resin)
- Synthetic Soda ash (→ glass)

Food processing

- **Main applications:**
- Food processing industry
- Baking industry
- Condiment and preservative agent
- Preserving of fish

Pharma

- **Main applications:**
- Infusion, dialysis solutions
- Pharmaceuticals

Oil and Gas

- **Main applications:**
- Drilling fluids

Broad variety of industry application areas (2)

Industry+ customer segment

Animal nutrition

Main applications:

- Animal feed
- Lickstones

Water softening

Main applications:

- Water softening
- Water treatment

Complementary

Main services:

- Waste management and recycling
- Granulation of Catsan® for Mars GmbH
- K+S Transport GmbH
- CFK (Trading)

Other

Main services:

- Dyeing works
- Leather treatment

Main salt suppliers in Europe

Production

Potash sites in Germany

Potash production

Share of annual production capacity (in %)

1. Wintershall	} Integrated Werra plant	~ 50
2. Unterbreizbach		
3. Hattorf		
4. Zielitz		~ 25
5. Neuhof-Ellers		~ 20
6. Bergmannsseggen-Hugo (production site only, no mining)		~ 5

Underground mining production cycle

Potash production

Potash processing above ground

Potash production

Thermal dissolution

Flotation

Electrostatic separation (ESTA®)

Management of residues

Potash production

- The mined rock salt only contains a limited share of usable material (max. 30%), therefore a residue accumulation is unavoidable.
- This challenge is shared among all potash producing companies in the world!
- The recovery of residues is performed as effective as possible.
- The methods, processes and equipment for the construction of tailings piles from solid residues are scientifically justified, tried and tested in practice.
- Solid or liquid residues are disposed of worldwide in the following ways:

Tailings piles

Underground disposal

River injection*

Deep well injection

(for K+S in the Hessian-Thuringian potash district until the year 2021)

Ø Share of residue disposed by this method in the Hessian-Thuringian potash district:

~80%

~9%

~8%

~3%

- These ways of disposal – depending on the corresponding site – are used also in combination. They currently represent the best available technique.

* With low river water levels in the Werra, there are possibilities for K+S in the Hessian-Thuringian potash district to temporarily store liquid residues in water basins or suitable mine spaces on site or temporary ways of disposal by flooding decommissioned mines or gas caverns in Lower Saxony or Saxony-Anhalt.

Current environmental investments create long-term planning security

Tailings pile extensions

Hattorf

Wintershall

Zielitz

- Completed by end of 2022 / beginning of 2023
- Next permit and significant investments in tailings pile extensions will not be necessary again until the end of the 2020s

Liquid residues

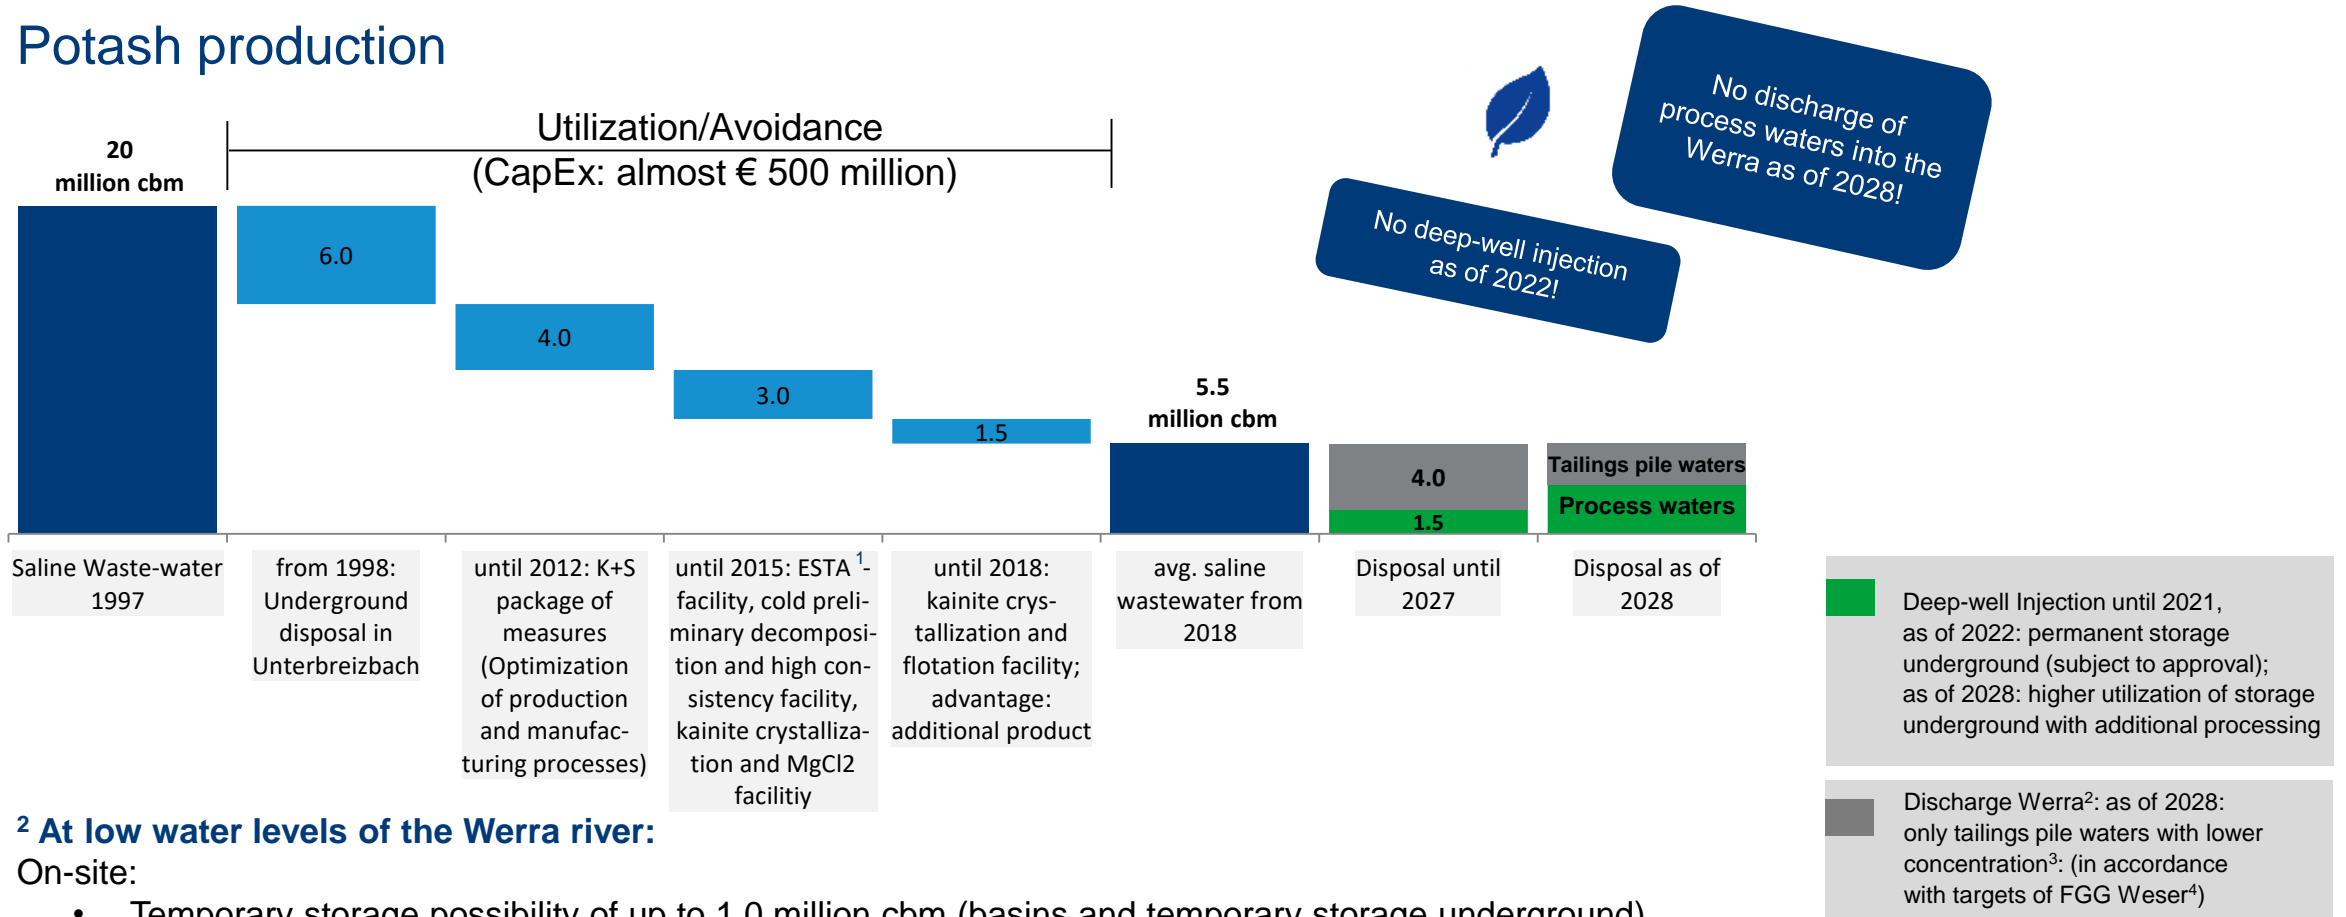

Werra

- Deep-well injection ends 2021
- As of 2022: permanent storage underground (subject to approval)
- From 2028: Higher utilization of underground storage through further treatment of saline water
- Injection from 2028: only less concentrated tailings pile waters and no process waters

Development of saline wastewater Werra river

Potash production

² At low water levels of the Werra river:

On-site:

- Temporary storage possibility of up to 1.0 million cbm (basins and temporary storage underground)

Off-site:

- Flooding of decommissioned mines or gas caverns for their restoration

¹Electrostatic separation method; ²Further reduction and avoidance of tailings pile waters targeted by building polders and covering tailings piles; continuing R&D developments, amongst others together with the company K-UTEC to be able to produce additional products from process and tailings pile waters. ³ River Basin Community Weser

Bethune – solution mining (example: primary mining)

Potash production

- In solution mining, freshwater is brought into solvent (salt) rock through a drill hole, therefore creating chambers, or caverns, filled with a water-salt solution. In a subsequent step, the saturated brine is brought to the surface through an additional pipeline.
- During the primary mining process, the cavern expands to create an ideal form for commencing secondary mining (see next page).

Bethune – primary versus secondary Mining

Potash production

Secondary mining [NaCl brine mining / crystallisation pond]

Operates at 50% lower production costs than primary mining

- Secondary mining uses exclusively saturated NaCl solution to selectively dissolve residual KCl from existing caverns
- **Advantages (in comparison to primary mining):**
 - lower energy intensity (e.g. injection brine is heated via waste heat from evaporators and KCl is crystallized in the cooling pond via natural cooling)
 - substantially more efficient with the use of water
 - reduces salt to tailings up to 30%

Bethune – strengthening our global presence

Potash production

- Expanding our current production portfolio in Germany with a North American production site → **Second-source supplier**
- Securing a **good asset base** with **competitive production costs**
- Sales and distribution through **existing distribution structures** of the K+S Group
- **Regional growth projects** in China and Southeast Asia
- **Flexible multi-product strategy**

Main production methods

Rock salt

Conventional
mining

Sea/solar salt

Crystallization
from sea water

Evaporated salt

Recrystallization
of purified brine

Brine

Controlled
borehole-brining

- Around 70% of worldwide salt production (more than 290 million tonnes including brine) is obtained from rock salt mining and solution mining.
- Approximately 30% of production is obtained from seawater and salt lakes.
- Salt is produced in almost every country in the world. Due to the high share of transportation costs in production costs, markets are generally regionally limited to the area around the production locations.

K+S ADR Program

The K+S ADR Program offers North American investors the opportunity to take stock in K+S. Since the ADRs are quoted in US dollars and dividends are also distributed in US dollars, this financial instrument closely resembles an American share. Two ADRs represent one K+S ordinary share. The K+S ADRs are traded in the United States under a level 1 ADR Program in the over-the-counter market (OTC).

Trade on OTCQX

- Symbol: KPLUY
- CUSIP: 48265W108
- Ratio: 2 ADRs = 1 Share
- Country: Germany
- ISIN: DE000KSAG888
- Depository: The Bank of New York Mellon

Benefits to North American investors

- Clear and settle according to normal U.S. standards
- Stock quotes and dividend payments in U.S. dollars
- Can be purchased/sold in the same way as other U.S. stocks via a U.S. broker
- Cost-effective means of international portfolio diversification
